A4 print-scale check

Print this PDF on A4 paper with a 100% or actual-size setting. Turn off fit-to-page resizing when checking scale. Review the viewer and printer-driver settings separately.

Reference line: 100 mm

Measure centre to centre of the two end ticks. A printed result other than 100 mm needs investigation before a dimension-sensitive batch.

50 x 50 mm

Measure the square horizontally and vertically, between the centres of opposite strokes. Both target lengths are 50 mm. A different result in each direction may need a device- or driver-specific check.

Record the actual sample

PDF viewer / printer: _____

Selected paper: _____ Scaling: _____

Line: _____ mm Square width: _____ mm Height: _____ mm

Check this sample before a full batch. This reference checks printed size; it does not calibrate a printer or certify dimensional accuracy. The PDF geometry was generated and checked in PDF units. No physical printer test is claimed.
